

SCHEDULE 13

SPECIAL MEASURES FOR THE CONTROL OF POTATO RING ROT (COUNCIL DIRECTIVE [80/665/EEC](#)) (OJNo. L180, 14.7.80, p.30)

2. Official testing pursuant to item 1 of this Schedule shall be carried out in accordance with appropriate methods to determine the actual presence of the Potato Ring Rot bacterium. A growing area, store or consignment shall be considered to be contaminated with the Potato Ring Rot bacterium if it is discovered in a single plant or tuber of potato. The official testing shall, in addition, be carried out either:

- on potato stocks which are clonally related to the stock involved in the contaminated unit and which may be infected because of their clonal relationship or
- on potato stock that may have become contaminated through contact with the contaminated stock or other objects which may also have been contaminated.
